Extended Vertical Support for DJI RS 3 Mini

Operating Instruction

SmallRig Extended Vertical Arm for DJI RS 3 Mini 4196 is designed to support various other cameras, such as Sony FX3 with 24-70mm lens, Canon R5 with 24-70mm lens, FUJIFILM X-T5 with 16-55mm lens and LUMIX GH6 with 12-60mm lens. The extension arm is appropriately 15mm longer than the original one, lowering the center of gravity of camera, and would not block camera movement. Besides, clear leveling scale facilitates quick balancing and switch between horizontal and vertical shooting.

Safety Guidelines

1. Environment

Do not use the product underwater, in extreme temperatures (e.g., freezing or direct heat), corrosive environments, or excessive dust. Dry metal parts immediately after liquid contact to prevent corrosion.

2. Load Capacity

Do not exceed the maximum weight capacity indicated on the product. Overloading risks structural failure, deformation, or accidental drops.

3. Cleaning & Maintenance

Clean surfaces with a dry, soft cloth. Avoid chemicals like alcohol or solvents. Ensure dry and ventilated conditions for long-term storage.

4. Structural Integrity

Do not modify the product (e.g., drilling, cutting)—this compromises structural integrity and increases drop risks.
