

SmallRig

CameraCamcorder Action Stabilizing NATO Handle

Operating Instruction

SmallRig DSLR Action NATO Handle 1955 is a sliding top handle for moving shoots. It is designed for quick release attaching and detaching on the camera without screws. Simply slide onto Safety NATO Rail and tighten down the thumbscrew. Except for sliding it from left to right on the Rail to keep your camera balanced, you can also slide it forwards and backwards to find the balance point of your rigs.

The handle is equipped with three shoe mounts on the top, in the front and at the back respectively, to which the light accessories, such as microphone, magic arm, could be attached. This handle is equipped with the hole pattern for ARRI accessory mount pins, so you can attach ARRI compatible extension blocks. The grip provides 1/4" & 3/8" mounting points for additional accessories. Additionally, we specially offer a 1/4" spanner for free access. It is quite convenient when you need to improve the camera and rigs balance.

Safety Guidelines

1. Environment

Do not use the product underwater, in extreme temperatures (e.g., freezing or direct heat), corrosive environments, or excessive dust. Dry metal parts immediately after liquid contact to prevent corrosion.

2. Load Capacity

Do not exceed the maximum weight capacity indicated on the product. Overloading risks structural failure, deformation, or accidental drops.

3. Cleaning & Maintenance

Clean surfaces with a dry, soft cloth. Avoid chemicals like alcohol or solvents. Ensure dry and ventilated conditions for long-term storage.

4. Structural Integrity

Do not modify the product (e.g., drilling, cutting)—this compromises structural integrity and increases drop risks.

5. Malfunctions

Stop use immediately if you notice deformation, unusual noises, or loose components, and contact support.
